The "ultra secure" OpenBSD would be a welcome addition. Thoughts?

Unfortunately VZ only supports Linux, which gives it excellent performance but limits OS choices.

We hope to offer Xen based plans soon, which will support BSD. Xen would also support Windows, and just about any other i686 OS. Xen does run a bit slower, and does not have access to burst memory.

But right now, BSD plans are not possible under our current technology.

Good morning,

Do you have an idea when Xen would be implemented?

Thank you

We're hoping to have the Xen service off the ground in about 2 months time. The control software is currently under development.

Any updates on the possibility of OpenBSD, Xen, etc?

Xen deployment was delayed, we hope to get back to it in the next couple of months.
