The template is based on Debian and includes Apache2, MySQL 5 and Ruby on Rails. It includes:

Ruby 1.8.7, mySQL, and RubyGems 1.1.1 are pre-installed, as well as the following packages:

- * Rails 2.1.0 Recent updates include: time zones, dirty tracking, Gem dependencies, named scope, UTC-based migrations, and better caching

- * ActionPack 2.1.0 Ruby on Rails' core MVC component, ActionPack allows you to integrate AJAX (without giving you a headache)

- * ActiveRecord 2.1.0 Take advantage of convention over configuration and save precious development time

- * ActionMailer 2.1.0 The Rails solution for dispatching e-mail

- * Rake 0.8.1 Automate common web development chores

You can put your website in /var/www with filezilla in sftp mode for a quick start on your next Ruby project!

Due to the memory requirements of Apache2 and Ruby, this template requires a Town plan or greater to run effectively.
