I want to create additional websites on vps. When creating a second cpanel account for the 2nd website, I receive an error indicating that I do not have additional ip address. The VPS account I signed up for is suppose to have 4 ips. How can I resolve this?

The second question is:

Can I create unique nameservers for all the sites?

Thank you!

The DNS servers built into cpanel can use any two IP's on your server. All the domains hosted on your server can use the same IP's for DNS, but the names can be different. So ns1.domain1.com for the first domain, and ns1.domain2.com for the second domain.

You can run custom domain servers for any number of domains on your cPanel server.

For more IP's, please open a support ticket. By default we only give two IP's to your server unless you ask for more (usually for SSL). Otherwise you can put any number of domains on a single IP.

Thanks for the prompt response. How do I go about creating custom dns server names?

Thank you!
