Never tuned DNS on my hosting because all is made by VPSVille.

Today DNS is down on my VPS

ping google.com

ping: unknown host google.com

What wrong and what to do ?

Check your /etc/resolv.conf file, it may have been corrupted.

It should read as follows:

```
nameserver 208.67.220.220
```

```
nameserver 208.67.222.222
```

All is OK now. Thanks.
But why this file was empty?
