Hi support

It's possible to add a feature to make an "automatic" backup image like a "cron" solution.

For example, i have one req. i need make a backup all Saturday 2 AM,(previus shutdown system,backup, and after system up)

Of course, i don't want to stay ALL SATURDAY's wake up to 2am for make this simple job.

For make a full backup on-demand.

Another great option, is after make this backup have the option to download this "image" by the console system, and burn on DVD.

Thanks

We do make regular backups of all our RAID arrays during off hours, but those are separate from the user backups you make from the control panel.

We are looking at adding a scheduler and a upload/download of backup images in the future.

Thanks for your suggestion!

Yes, adding a scheduler would be greatly appreciated.

Hey, this is almost 3 years later...
